

Anguilla's vulnerability to the effects of global climate change is disproportionately high when compared to the country's very small contribution to generating greenhouse gases (GHGs) through consumption of fossil fuels. To some extent, Anguilla has the opportunity to address these challenges by implementing

Anguilla: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Energy statistics are reported from the Anguilla Electricity Company (ANGLEC) on consumption, use, and sold. Fuel importation data sourced by HM Customs is data on the importation of fuel by the fuel companies; Sol (St. Lucia) and Delta Petroleum via the Corito port, this data is only available in percentage change over the previous.

Anguilla This profile provides a snapshot of the energy landscape of Anguilla, a British overseas territory in the Caribbean. Anguilla's residential utility rates start at \$0.16 per kilowatt-hour (kWh), below the Caribbean regional average of \$0.33/kWh. Like many island nations, Anguilla is almost entirely dependent on

Anguilla U.S. Department of Energy Energy Snapshot Population Size 17,422 Total Area Size 91 Sq. The project features a 125-kW mobile containerized battery system that can be quickly deployed to numerous locations in order to best accommodate Anguilla's dynamic energy needs. The Gridspan Energy system is uniquely designed for plug-and-play use, with the ability to connect to a site in less than 15-minutes after transport.
