

What are the benefits of using behind the meter resources?

A major advantage of behind-the-meter resources is their ability to reduce energy and demand costs on electricity bills. By optimizing energy use from solar panels and batteries, organizations can minimize the amount of energy they draw from the grid during peak demand times and shift energy usage from high-priced to low-priced hours.

What is a behind the meter system?

Energy that a facility receives from behind-the-meter solutions bypasses the electric meter, hence "behind the meter." They differ from front-of-the-meter systems in many ways, including who typically owns the systems, where they are installed, and the size of the systems installed. What are examples of behind-the-meter solutions?

Why do we need behind-the-meter energy resources?

Behind-the-meter resources can also provide energy consumers with greater energy independence and resilience, as they are able to generate power on-site and can continue to operate even during grid outages.

Are behind-the-meter solutions a good fit for your business?

Behind-the-meter solutions, or DERs, can be an especially good fit for organizations that want to reduce their energy costs, improve energy resilience, and reduce their carbon footprint. However, the specific benefits and costs will depend on a few factors, including the facility's energy usage, location, and complexity of the project.

What is the difference between behind the meter and front-of-the-meter systems?

**BEHIND-THE-METER VS. FRONT-OF-THE-METER** While behind-the-meter and front-of-the-meter systems are integral parts of the energy mix, they serve different roles and impact energy users differently. Behind-the-meter systems allow customers to take control of their energy generation and use, offering potential cost savings and increased resilience.

What is behind the Meter (BTM)?

Behind-the-meter (BTM) refers to the energy systems located on the customer's side of the utility meter. These systems could include solar panels, battery storage, or energy-efficient appliances.
