

What does en 14470-1 mean?

EN 14470-1: This is what it says - this is what your safety cabinet does Drum handling made easy: Five proven aids for drum transport in the DENIOS magazine- read now! Anyone who stores flammable liquids at the workplace should do so in safety cabinets tested to EN 14470-1.

What is BS EN 14470?

BS EN 14470 is a European standard consisting of two parts. Part 1 refers to 'safety storage cabinets for flammable liquids', and part 2 refers to 'safety storage cabinets for pressurised gas cylinders'. The standard was implemented in the course of European harmonisation, aiming to standardise various safety-regulations in the different countries.

What is en 14470-1 fire resistance?

EN 14470-1 divides safety cabinets into 4 classes according to their fire resistance. The class number - 15,30,60 and 90 - represents the duration in minutes that the safety cabinet must at least withstand in case of fire. In many European countries, safety cabinets with a fire resistance of 90 minutes are state-of-the-art.

Does a safety cabinet meet en 14470-1?

If you opt for a safety cabinet with fire protection from the DENIOS range, you can be confident that it is tested according to EN 14470-1 and meets all the relevant requirements. But what exactly is EN 14470-1 and which load tests does a hazardous materials cabinet have to pass before it can provide added safety to your business?

Why is BS-EN 14470 safety storage cabinet insulated?

BS-EN 14470 safety storage cabinets are insulated to help restrict damage locally. Other safety storage cabinets built to different construction standards may not have insulation, instead relying on the sprinkler systems in the rooms they are installed in, to limit the rise in temperatures and spread of fire.
