

Burundi atrium power products

What are the main sources of energy in Burundi?

Ranked in order of importance, the main sources of energy consumed in Burundi are: biomass (wood), petroleum products, electricity from hydropower sources and peat. About 98% of the Burundian population, both urban and rural, use wood and charcoal as an energy source, mainly for heating and cooking.

What is the energy mix in Burundi?

The energy mix has remained virtually unchanged since 2010. New hydroelectric power stations at Jiji and Mulembwe with a total capacity of 48 MW are under construction. These new power plants will double Burundi's production capacity, which is currently 39 MW.

How will new power plants affect Burundi?

New hydroelectric power stations at Jiji and Mulembwe with a total capacity of 48 MW are under construction. These new power plants will double Burundi's production capacity, which is currently 39 MW. They will also increase the national electrification rate from 5% to 8% and help to bridge the energy deficit.

Does Burundi have solar power?

Burundi's solar resources have a lot of potential. The average sunshine received annually is close to 2000 kWh/m²/year, which is similar to the southern Mediterranean regions in Europe. Initiatives in this direction are already under way.
