Can a smart mirror be a home automation system?

Smart mirrors can be linked up to WiFi easily, so you can make sure they're always connected with other tech within your house. They could become part of an even bigger home automation system along with smart plugs, thermostats, and lights, meaning everything forms one convenient ecosystem for a smarter household setup.

What is a smart mirror?

The smart display is positioned behind the glass and can be a monitor, TV, or tablet. This component is essential to exhibit information like traffic or weather. It's also a key element that differentiates a smart mirror from a looking glass. Here, it's important to note that the display size isn't typically the same as the size of the mirror.

Can a smart mirror make your life smarter?

In addition to your smart fridges, smart cars and, of course, smartphones, you can now make your lifestyle a little bit smarter with a smart mirror. Not your average sheet of glass, a smart mirror looks like a regular mirror at first glance -- but then wakes up to reveal a slew of smart options via a digital display hidden underneath.

How much does a smart mirror TV cost?

A smart mirror TV has the same structure, but it uses a full-fledged TV and a dielectric mirror to hide the TV when it's switched off. Smart mirror prices vary from around \$250 to over \$1500, depending on size and functionality. You can also make a DIY smart mirror, but you need technical expertise and some time to spare.

How do smart mirrors work?

Smart mirrors can connect to the internet and your smartphone via WiFi and Bluetooth. So, you can check your social media feeds, sync your calendar events, get reminders, and check prices. If your mirror is touch-enabled, you'll get much more functionality. For example, you can search on Google, research recipes, shop, and check your email.

Do smart mirrors exist?

You don't have to wonder anymore, though, because smart mirrors already exist. A smart mirror consists of a monitor and a tiny computer behind a two-way mirror. It can show the time, weather, calendar events, and daily news.

Additionally, chickens, apiaries (beehives) and other small livestock can attract the attention of a bear. To keep coops and beehives secured, install an electric fence or store in an enclosed area. For instructions and a list of materials to build an electric fence, see the How to Protect Your Beehives from Black Bears brochure.
