Indeed, most predictions show that even by 2050, only around 60% of the cars on the road will be electric-powered. Electricity companies and governments have investigated the likely power demand based on

Can the electric car cover store electricity

a number of different scenarios for electric car take-up. The results make interesting reading:

The more energy a vehicle's battery can store, the longer its range, but this will vary based on factors that impact its efficiency. Factors can include the battery electric vehicle itself design (weight, shape, size, etc.), as well as how it's being driven (e.g. terrain, speed, driver behaviour, passenger load, etc.).

No. Your breakdown cover with us includes electric and hybrid vehicles, not just petrol and diesel ones. That means you don't need a different policy if you drive an electric car.
