For an economic comparison of the technologies, the average discounted electricity generation cost, termed the "levelized electricity cost" (LEC), is calculated. When applied to energy storage systems, it corresponds to the average discounted costs of energy storage. According to [9], it

It may be useful to keep in mind that centralized production of electricity has led to the development of a complex system of energy production-transmission, making little use of storage (today, the storage capacity worldwide is the equivalent of about 90 GW [3] of a total production of 3400 GW, or roughly 2.6%). In the pre-1980 energy context, conversion methods ...

The modern energy economy has undergone rapid growth change, focusing majorly on the renewable generation technologies due to dwindling fossil fuel resources, and their depletion projections [] gure 1 shows an estimate increase of 32% growth worldwide by 2040 [2, 3], North America and Europe has the highest share whereas Asia, Africa and Latin ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1].Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...
