

What is the Danish Energy Agency's global cooperation?

The Danish Energy Agency's Global Cooperation partner with other countries and share the Danish experiences on shaping an energy system that combines a green, low-carbon and reliable energy supply with economic growth. Geographically the energy partnerships cover 24 countries around the world.

How has Denmark changed the energy system?

During the following 40 years, Denmark began constructing a domestically sourced energy supply, upscaling the use of renewables and making the entire system more energy efficient. Through clearly defined ambitious targets, Denmark has changed the structure of the energy system to be holistic and integrated, yet fully reliable.

What is energy on subscription in Denmark?

Energy on subscription is a well known concept in Denmark since about 65 % of Danish buildings are heated by district heating. District heating is characterized by a small sign-on fee, an annual fee for insuring well running system, and payment for the actual used heating. Energy service How do I finance the heat pump? Can I obtain a mortgage/loan?

How is energy used in Denmark?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why is bioenergy important in Denmark?

Moreover, bioenergy plays an important role in the Danish energy system. Clean energy is a Danish passion. Today, 50 per cent of electricity in Denmark is supplied by wind and solar power. Wind energy is well-established in Denmark, which long ago decided to put the Danish climate's constant breezes and blusters to practical use.

What is the Danish energy model?

The Danish Energy Model is a holistic system that includes all energy sectors. At the Danish Energy Agency, we are making a difference every day - in Denmark and in countries all over the world. We view climate change as the biggest challenge we are facing. We know we need to be ambitious and innovative in our approach to climate change mitigation.

OverviewEnergy planHistoryEnergy sourcesElectricityDistrict heatingTransportCitiesThe 2017 energy plan for the country set a target of achieving at least 50% renewables by 2030. This includes 11.5 GW of onshore and 13 GW of offshore wind power by 2030. This was modified in 2019 to target reducing greenhouse gasses in 2030 by 70%, compared to 1990. The target for 2050 is 100% renewable energy. Over the past decade, Denmark's energy sector has seen significant changes, characterized b...

## Denmark energy as a service
