

What type of energy does the Dominican Republic use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Fossil fuels- including oil, natural gas, and coal - supply most of the Dominican Republic's energy, supplemented by smaller amounts of renewables, including hydro, wind, solar and biofuels.

Where is Energas located in the Dominican Republic?

Energas is a major electricity generator in the Dominican Republic through the 300 MW San Pedro de Macor's Electricity Company (CESPM) power plant, located in the Eastern region of the country.

What is Energas & AES Dominicana's vision for a sustainable future?

Energas and AES Dominicana shared a vision for a sustainable future in the Dominican Republic by diversifying the country's energy matrix with greener energy solutions while ensuring a strong, resilient grid.

Who regulates energy and mining in the Dominican Republic?

On July 3, 2013, by Law 100-13, the Dominican government formally created the Ministry of Energy and Mining (Ministerio de Energí;a y Minas) as the regulator of the energy policies and the nation's mining. As the other Ministries of the Dominican Republic, the Ministry of Energy and Mining is subdivided into vice-ministries.

Will the Dominican Republic produce 25% of its electricity by 2025?

The country aims to produce 25% of its electricity from renewable energy sources by 2025. The Dominican Republic's Nationally Determined Contribution (2020 revision) calls for a 27% reduction in greenhouse gas emissions by 2030 relative to business as usual, up from 25% in the country's original NDC.

Does Energas use natural gas in Dominicana?

Through AES Dominicana, we introduced natural gas into the country over 20 years ago, saving our customers over half a billion dollars and avoiding four million tons of CO₂ emissions every year. However, the Eastern region of the country where Energas' facility is located lacked existing natural gas networks or pipelines to transport natural gas.

The Ministry of Energy and Mining (Spanish: Ministerio de Energí;a y Minas) of the Dominican Republic is a government institution in charge of the responsible development of the country's energy and mining sectors. Its main concern is to keep a reliable energy infrastructure and preserve an adequate exploitation of the country's minerals.

Joel Santos Echavarrí;a, the Minister of Energy and Mines, has declared the Dominican Republic's dedication to promoting solar energy and transitioning to renewable energy in both the Dominican Republic and the broader Latin American and Caribbean region.

The Latin American nation of the Dominican Republic targets to raise the share of renewable energy in its national energy mix to 25% by 2025 with solar energy being a major driver, according to the country's Minister of Energy and Mines Joel Santos. Under the National Development Strategy, their share should go up to 30% by 2030.
