

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

How is energy used in Bolivia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Who regulates the energy industry in Bolivia?

The AJAM (Autoridad Jurisdiccional Administrativa Minera) is responsible for permitting and exploration licenses. The main regulatory bodies in Bolivia are: AE (Authority of Fiscalization and Social Control of Energy), the Vice Ministry of Electricity and Alternative Energy, and the Vice Ministry of High Energy Technologies.

Why did Bolivia reduce its gas reserves in 2019?

During 2019, Bolivia announced a 30% reduction in gas reserves at the same time it began to experience an extended period of political turmoil leading many countries to shy away from long term contracts. Bolivia's rising domestic consumption and declining overall gas production will make Bolivian gas exports scarce by 2025.

How much coal does Bolivia consume a year?

Countrywide, Bolivians consume an annual total of 7.79 bn kWh, a per capita consumption of 676 kWh annually. Bolivia does not produce, consume, or import coal. Bolivia does not have any new coal sources or projects as of 2021. Bolivia is the largest producer and exporter of natural gas in South America.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

These are solutions in the field of renewable energies, which TotalEnergies has developed and implemented around the world and that could be applied in Bolivia, benefiting public and private industry.
