The energy storage industry has ushered in rapid development, and the speed of policy introduction has been significantly accelerated. Driven by the policies, energy storage is changing from "optional" in the past to "mandatory" in the future power system. Table 1 summarizes the policies of China's energy storage industry.

The impacts can be managed by making the storage systems more efficient and disposal of residual material appropriately. The energy storage is most often presented as a "green technology" decreasing greenhouse gas emissions. But energy storage may prove a dirty secret as well because of causing more fossil-fuel use and increased carbon ...
