## Energy storage wire processing

#### Why do we need flexible energy storage devices?

To achieve complete and independent wearable devices, it is vital to develop flexible energy storage devices. New-generation flexible electronic devices require flexible and reliable power sources with high energy density, long cycle life, excellent rate capability, and compatible electrolytes and separators.

Why is a wire harness necessary for Electromobility?

It is essential for electromobility to have a physical automotive wire harness that has been developed to meet the new required functions. Electric vehicles cannot operate efficiently with a standard low-voltage power supply. It is necessary to have a multi-voltage power supply with a direct current electrical energy storage system.

Will wire-based superconducting technology be deployed on a space mission?

Although wire-based superconducting technology has not yet been reportedly deployed on a space mission, new applications based on proof-of-concept prototypes 128 and advances in cryocoolers for the space environment 129 will certainly move this field forward.

What is a 'energy fiber' based on?

A novel,all-solid-state,flexible "energy fiber" that integrated the functions of photovoltaic conversion and energy storage has been made based on titania nanotube-modified Ti wireand aligned MWCNT sheet as two electrodes. the "energy fiber" could be bent into various forms depending on the application requirement.

What is the mechanical reliability of flexible energy storage devices?

As usual, the mechanical reliability of flexible energy storage devices includes electrical performance retention and deformation endurance. As a flexible electrode, it should possess favorable mechanical strength and large specific capacity. And the electrodes need to preserve efficient ionic and electronic conductivity during cycling.

How is a wire-shaped lithium-ion battery assembled?

The elastic wire-shaped lithium-ion battery (Figure 3B) was assembled by winding above electrodes around an elastic substrate with a spring structure. As shown in the Figure 3C-D, the wire shpaed battery can be woven into the flexible textile.
