How do I tether a gateway device to a myenergi server?

he myenergi server. The gateway device MUST be connected to the Master device. If radio connection is not possible you have the option to tether two devices using an Ethernet cable. When pairing devices, they will automatically use the Ethernet link if available. Further detail on the Ethernet connection and WiFi see separate vH b & WiFi manual.

On the app's home screen, the Eddi is showing as consuming surplus energy at a rate of 1.4kW, but on the graph screen, the "Consumed gen." is zero. Under the lower graph, the Eddi is shown as having used 3.5kWh and Home 4.7kWh.

The MyEnergi Eddi is an eco-smart energy management system, which diverts surplus power from solar PV or wind generation to a water/storage heater rather than exporting it to the grid. The Eddi promotes self-consumption of the ...

Bring an eddi into your home and you can maximise the consumption of the 100% green energy generated from your solar PV or wind generation system. Rather than giving excess electricity generation back to the grid as per a standard PV system, with our intelligent eddi power diverter, that extra power generation can be used to power heating ...

The MyEnergi Eddi is an eco-smart energy management system, which diverts surplus power from solar PV or wind generation to a water/storage heater rather than exporting it to the grid. The Eddi promotes self-consumption of the energy generated by microgeneration systems and helps to save money on your energy bill in the process.

The first thing I noticed was that in the excellent Eddi installation manual, on the application example p56-57, it detailed how the Eddi should be connected up to work alongside an ASHP that also did the water heating. This made it clear that: A. The Eddi needs to have a Relay & Sensor board fitted B.
