

Overview Roles in the power grid Forms Economics See also External links Energy derived from solar, tidal and wind sources inherently varies on time scales ranging from minutes to weeks or longer - the amount of electricity produced varies with time of day, moon phase, season, and random factors such as the weather. Thus, renewables in the absence of storage present special challenges to electric utilities. While hooking up many separate wind sources can reduce the overall variability, solar is reliably not available at night, and tidal power ...
