Hyme's solution transforms renewable electricity into reliable, green and cost-competitive steam for industrial processes. Discover how our solution works and can support you in your decarbonisation journey.

Provider of energy storage services intended to improve the integration of sustainable energy in the energy system. The company offers to transform intermittent renewable energy into decarbonization of power and heat generation at a large scale, enabling clients to store electricity in the form of high-temperature heat in molten salt.

Our story. Founded in 2021, we're changing the future of thermal energy storage with molten hydroxides as our innovative storage medium. Years of previous research into the unique thermal properties of molten hydroxides led us to develop a breakthrough salt treatment system -- with strong potential within the thermal energy storage market.

Guatemala: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.
