Figure 1: Grid-connected household energy storage system . Off-grid household energy storage system is independent, without any electrical connection to the grid. Therefore, the whole system does not need grid-connected inverter except PV inverter. The off-grid household energy storage system is also divided into three working modes.

An Energy Storage System (ESS) is a logical (larger) next step compared to a backup system, but one before going totally off-grid, as there is mostly a grid present. ESS systems don't have to be sized to power all the loads in the worst-case like an off-grid system, they target the baseload to optimise solar usage and limit energy import, and ...
