Iraq"s power sector suffers from a double whammy: unsustainable growth in power demand, coupled with under-investment and a lack of reforms in generation, transmission, and distribution. ... The need for grid reinforcements, flexible power systems, and storage will grow in direct proportion to the share of renewable energy in the power mix ...

A shortage of electricity is reported in Iraq owing to several challenges in generation, transmission, and distribution of its power systems, subjecting households to periodic blackouts on a daily basis nsequently, diesel generators in Iraqi districts are utilized to provide electricity for residential appliances using private cabling networks.

Grid-scale storage technologies have emerged as critical components of a decarbonized power system. Recent developments in emerging technologies, ranging from mechanical energy storage to electrochemical batteries and thermal storage, play an important role for the deployment of low-carbon electricity options, such as solar

Iraq"s plan to reconstruct power plants in liberated areas and add 11 gigawatts of capacity is an ideal solution to their electricity woes - and a model for nations looking to spur on economic growth by redeveloping energy infrastructure.
