

What is Japan's Energy Policy?

Japan's energy policy is guided by the principles of energy security, economic efficiency, environmental sustainability and safety (the "three E plus S"). The 5th Strategic Energy Plan, adopted in 2018, aims to achieve a more diversified energy mix by 2030, with larger shares for renewable energy and restart of nuclear power.

Does Japan have a high level of electricity security?

Traditionally, Japan has a very high level of electricity security by international comparison. However, in recent years a series of natural disasters caused long and large-scale blackouts that highlighted the vulnerabilities of the current system.

How will the IEA help Japan manage its energy sector?

In this report, the IEA provides energy policy recommendations to help Japan smoothly manage the transformation of its energy sector. In October 2020, the new Prime Minister of Japan declared that by 2050 Japan will aim to reduce greenhouse gas emissions to net-zero and to realise a carbon-neutral, decarbonised society.

What is happening in Japan's electricity market?

Liquidity in the wholesale market is also increasing, with some 30% of electricity now being traded at the Japanese Electric Power Exchange. New markets (including a balancing, baseload, capacity and non-fossil certificate market) have been established to address market barriers and further foster competition.

What are Japan's energy goals?

Japan has ambitious goals to promote distributed energy sources, connect mobility infrastructure to the power grid, and to use digital technologies for efficient electricity demand management and demand response.

What challenges does Japan face in energy security?

As an island country with limited natural resource endowments and no international gas pipelines and electricity connections, Japan faces fundamental energy security challenges.

4 %; In comparison, in the year ending March 2024, fossil fuels were Japan's top energy source at 68.6 per cent, with renewables accounting for 22.9 per cent and nuclear energy, 8.5 ...

20 %; Japan's government plans for the first time to make solar, wind and other types of renewable energy the country's biggest source of power. It aims to achieve that by fiscal 2040.

12 %; Nearly 70 per cent of Japan's power needs in 2023 were met by power plants burning coal, gas and oil. Almost all must be imported, last year costing Japan about US\$500 ...

1 ?· Nuclear power is forecast to be the cheapest baseload electricity source in Japan in 2040, highlighting the government's desire to restart the nation's idled reactors.

2 ?· According to the ministry's projection, nuclear power will cost minimum 16.40-18.90 yen per kilowatt-hour, up from 14.50 yen under the previous estimate due to rising expenses ...

5 ?· The latest revision will indicate for the first time Japan's targets for its breakdown of energy sources in fiscal 2040, aiming for 40%-50% renewable energy, 20% nuclear power and ...

18 ?· Japan wants renewable energy to account for around 40% to 50% of its electricity mix by fiscal year 2040 with nuclear power taking up another 20%, according to a new energy ...

21 ?· Japan's 2040 nuclear power target is in line with the 2030 target of between 20% and 22%, despite the challenges faced by the industry after the 2011 Fukushima disaster. ...
