## Kohl energy Belgium

Excess wind and solar energy can be converted to hydrogen via water electrolysis, one of the essential pillars of the transition from fossil fuels to green, renewable energy sources. However, the large-scale production of renewable hydrogen is not yet a competitive proposition.

The energy sector in Belgium is shaped by the policies of its national and regional governments as well as the European Union. The monitoring of the electricity and natural gas market happens on three regional levels, the Brussels-capital region, the Flemish region, and the Walloon region.

On October 29, 2021, the federal government adopted its first hydrogen strategy on the proposal of Energy Minister Tinne Van der Straeten. This document announced for the first time Belgium's ambitions for renewable molecules and the role it wants to ...
