A lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li^+ ions into electronically conducting solids to store energy. In comparison with other commercial rechargeable batteries, Li-ion batteries are characterized by higher specific energy, higher energy density, higher energy efficiency, a longer cycle life, and a longer ...

A review. Lithium-ion batteries (LiBs) are a proven technol. for energy storage systems, mobile electronics, power tools, aerospace, automotive and maritime applications. LiBs have attracted interest from academia and industry due to their high power and energy densities compared to other battery technologies.

This type of battery is also an interesting option for powering zero emission electric vehicles and in grid energy storage, but such applications require that a number of improvements be made to the existing lithium ion battery technology. Lithium ion batteries, just like all other battery types, require materials known as electrodes to ...

Because of their elevated power compression, low self-discharge feature, practically zero-memory effect, great open-circuit voltage, and extended longevity, lithium-ion batteries (LIBs) have resumed to attract a lot of interest as a probable power storage technology.
