

Is Madagascar ready for solar power?

With all regions of Madagascar enjoying over 2,800 hours of sunlight per year, the Grande Ile is the perfect location for development of solar power, with a potential capacity of 2,000 kWh/m²/year. The Government is counting on this potential to fulfill its objective of providing energy access to 70% of Malagasy households by 2030.

What is Scaling Solar in Madagascar?

Madagascar is currently the fifth country in Africa in which a Scaling Solar tender process was launched, after two tender processes in Zambia, one in Senegal, and another in Ethiopia. It is also the first Scaling Solar project to include solar energy storage requirements by pairing solar with batteries.

How much solar power does Madagascar have?

With only a 15% connection rate, Madagascar faces a chronic lack of access to electricity, which hampers its economic and social development. However, there is tremendous potential in terms of solar power, estimated at 2,000 kWh/m²/year as a result of the 2,800 hours of annual sunlight the country enjoys.

What is happening in Madagascar?

Over the past decade, JIRAMA's customers, both household and industrial alike, have experienced repeated power outages. In Madagascar, only 15% of the population has access to electricity. In 2017, the country had just 570 MW of mainly thermal (60%) and hydroelectric (40%) installed production capacity.

Does Madagascar have a business climate?

In the World Bank Group's Doing Business 2018 report that assesses the business climate, Madagascar ranks 184 out of 190 countries for access to electricity. Keenly aware of this challenge, in 2014, the Government of Madagascar decided to embark on intensive reforms to transform the sector.

How much money does the EIB lend to Madagascar?

Since 1970, the EIB has lent a total of EUR 904 million in support of long-term investments in Madagascar for key infrastructure as well as for the private sector. EIB Global is the specialised arm of the EIB Group designed to increase the impact of international partnerships and development finance and a key partner in the Global Gateway strategy.

The Malagasy government intends to rely on solar energy, especially off-grid solar systems, to reduce the gap between cities and villages. Solar energy already accounts for 2% of Madagascar's electricity mix according to the United States Agency for International Development (USAID).

As the first large-scale PV hybridisation of heavy fuel oil plants in Madagascar, the Malile project is truly ground-breaking and once fully operational will significantly support the country's GHG emission targets.

The funds will help WeLight make progress with the development and construction of solar mini-grids in 120 rural villages in Madagascar. The project will give more than 45 000 households and businesses first access to sustainable, affordable and productive energy.
