

Nicaragua solar panel for irrigation pumps

Droughts are deteriorating the richness of the Nicaraguan soil. We facilitate the use of solar-powered irrigation systems to confront this urgent problem and help Nicaraguan farmers. Recurring precipitation deficits are leaving Nicaraguan ...

The "Agrosolar" project, funded by the British embassy, has begun to pump water to irrigate crops right at the start of Nicaragua's dry season. El Timal is in the almost forgotten area between Nicaragua's two large lakes, ...

In February 2018, 10 participants joined GRID in Nicaragua for a journey to install a solar-powered drip irrigation system on the small farm of Freddy and Maria Luisa Cruz in the rural ...

The solar panel, or photovoltaic (PV) panel, is the most crucial part of a solar-powered irrigation system. It turns sunlight into electricity when the sun is out. This electricity is ...

Surface water pumping systems are solar-powered irrigation systems that rely on capturing surface water sources. These systems often use floating solar panels or solar pumps to extract water from rivers, lakes, or ...
