Microgrids (MGs) are localized grids which accommodate a variety of distributed energy resources (DERs) and different types of energy users. They are believed to be a promising paradigm that can improve the utilization of DERs and also users' benefits [1]. However, in order to ensure the stability and reliability of MGs, many tough problems need to be resolved, among ...

This paper proposes an option game model that is applicable to multi-agent cooperation investment in energy storage projects. A power grid enterprise and power generation enterprise are assumed to act as the cooperation investors. A revenue sharing coefficient and cost distribution coefficient are introduced to simulate the realistic cooperation behavior of energy ...
