

How much energy does Palestine need?

Palestinian energy demand increased rapidly, increasing by 6.4% annually between 1999 and 2005. Future consumption of electricity is expected to reach 8,400 GWh by 2020 on the expectation that consumption will increase by 6% annually.

What is the main source of energy in Palestine?

Indeed, electricity is the main source of energy in the Palestinian energy mix, and for this source, the residential sector is the main consumer. Other energy sources have their own leading consumption sector. Diesel and gasoline are mainly consumed by the transport sector, LPG by the residential sector.

How to solve the current energy issues in Palestine?

To solve the current energy issues in Palestine, the following recommendations are proposed to reduce the dependency on imported energy generated from non-renewable sources.

What is the future consumption of electricity in Palestine?

Future consumption of electricity is expected to reach 8,400 GWh by 2020 on the expectation that consumption will increase by 6% annually. The Palestinian Electricity Transmission Company (PETL), formed in 2013, is currently the sole buyer of electricity in the areas under Palestinian Authority (PA) control.

Is solar energy a reliable source of energy in Palestine?

In Palestine, solar energy is a reliable source of energy due to its high average radiation and sunshine rate per day (Daoud, 2018). Yet, the yearly progress of the solar energy is around 1% only as indicated by the Palestinian Energy Authority (PEA) plan (PEA, 2013). Fig. 1.
