What are HYDAC piston accumulators?

HYDAC piston accumulators are hydropneumatic accumulators. Indeed, its floating piston serves as a separation element between a compressible gas cushion and the operating fluid. First of all, their components are: Therefore, the adjustment of the piston accumulators can be very flexible according to customer requirements.

What is a piston accumulator?

Piston Accumulators are a cost effective option for numerous functions involving energy storage, and sometimes shock absorption in a hydraulic or fluid system. They are well suited for applications needing: High Pressure Ratios, Large Volumes of Oil, High Fluid flow rates, Volume monitoring by way of piston position sensor or switch systems.

What is a SK350 piston accumulator?

The piston accumulator series SK350 is HYDAC's most versatile series with a repairable design and large selection of options. The largest range of possible sizes, material construction, and other options are offered. Standard and Low Friction piston designs are available for superior performance and flow rates.

Where can I find CAD data for my HYDAC piston accumulators?

We've found several options for your language settings. Do you want to switch to a different website? HYDAC piston accumulators can be customised with a chosen diameter and nominal volume. More details can be found [here](#). CAD data can't be found at the product category level. Instead, it can be found directly at an individual product level.

How do hydraulic accumulators store pressure energy?

Hydraulic accumulators do not therefore store pressure energy. The compressibility of a gas (nitrogen) is utilised in hydraulic accumulators for storing fluids. HYDAC piston accumulators are based on this principle. A piston accumulator consists of a fluid section and a gas section with the piston acting as a gas-tight separation element. The gas is

What are HYDAC hydraulic accumulators?

ROBUST AND VERSATILE: Wherever hydraulic tasks need to be performed, HYDAC hydraulic accumulators can help. They are versatile, make your machine more convenient to use, secure your hydraulic system and are used to increase the energy efficiency of hydraulic systems and for many other tasks.

Whether it's piston accumulators, diaphragm accumulators, or bladder accumulators: our hydraulic accumulator selection tool leads you to the best hydraulic accumulator for your application in just a few steps. ... you will be taken straight to the ideal product from the HYDAC product range. Here you will find our bladder accumulators, piston ...

So, the utilisation of compressibility of a gas (nitrogen) in hydraulic accumulators is for storing fluids. That's why HYDAC bases its piston accumulators on this principle. Indeed, a piston accumulator consists of a fluid section and a gas section with the piston acting as the gas-proof screen. There is a pre-charge of the gas section with ...

HYDAC piston accumulators are suitable for high flow rates (e.g. 1000 l/s). 1.7.1 Effect of sealing friction
The permitted piston velocity depends on the sealing friction. Higher piston velocities are possible where there is less sealing friction. HYDAC piston accumulators of piston design 2 allow velocities of up to 3.5 m/s.
