## Private energy storage

Is it profitable to provide energy-storage solutions to commercial customers?

The model shows that it is already profitable provide energy-storage solutions to a subset of commercial customers in each of the four most important applications--demand-charge management,grid-scale renewable power,small-scale solar-plus storage,and frequency regulation.

Why do companies invest in energy-storage devices?

Historically,companies,grid operators,independent power providers,and utilities have invested in energy-storage devices to provide a specific benefit,either for themselves or for the grid. As storage costs fall,ownership will broaden and many new business models will emerge.

What are the benefits of energy storage?

There are four major benefits to energy storage. First, it can be used to smooth the flow of power, which can increase or decrease in unpredictable ways. Second, storage can be integrated into electricity systems so that if a main source of power fails, it provides a backup service, improving reliability.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

How does energy storage work?

Energy storage can be used to lower peak consumption(the highest amount of power a customer draws from the grid),thus reducing the amount customers pay for demand charges. Our model calculates that in North America,the break-even point for most customers paying a demand charge is about \$9 per kilowatt.

Are energy storage products more profitable?

The model found that one company's products were more economic than the other's in 86 percent of the sites because of the product's ability to charge and discharge more quickly, with an average increased profitability of almost \$25 per kilowatt-hour of energy storage installed per year.
