In October 2022, Tynwald voted to support the Climate Action Plan 2022-2027, which commits Manx

Utilities to decarbonising the existing power system by 2030. Our Transition Programme is set up outside of the business as usual functions, with our team tasked with the delivery of this important climate target; and the steps necessary to support continued secure, economic and ...

Manx Solar Electrical undertakes every aspect of the installation, including annual servicing plus all requisite maintenance work. With utility prices rising and green issues climbing the agenda, there has never been a better time to invest in ...

A Battery System can make full use of the power generated by your solar panels, ensuring that any unused power is stored on site to be used later when needed. If your electricity is supplied with two rates (a day rate and cheaper night rate), the solar + battery combination ensures that peak rate electricity usage is kept to a minimum.

We install JA Solar and Sun Power Photovoltaic systems, on-roof, in-roof or ground mounted. We always recommend to use Solar Edge optimisers and inverters to boost output. Solar panel electricity systems, also known as photovoltaics (PV), ...

Balancing the Isle of Man's electricity network requires stabilising power; this cannot be provided from sources which are reliant on the weather to produce electricity as these sources cannot be guaranteed at all times. In all scenarios the most cost-effective solution of providing this stabilising power is a new interconnector to the UK ...

Why Doesn't Singapore Use Solar Energy? With the high average solar irradiance of 1,580 kWh/m² per year, Singapore has a lot of potential for solar power generation. However, the limits imposed by the small land area of the country (728 km²) mean that only flush mount and roof-ground mount systems on existing buildings are acceptable. The ambitious ...

"The solar farm would generate enough power to meet more than 7% of the Isle of Man's current electricity demand and support the Government's aim for electricity on the Island to be 100% green by 2030." The project represents an investment of around £30m across the 40-year anticipated life of the project, with no public investment.
