

The National Energy Efficiency Action Plan looks at the necessary measures that need to be put into place in order for Gibraltar to achieve its energy saving targets of 20% by 2020, as set by the EU. Measures are distributed across varying time scales and sectors ranging from public, commercial, building and transport sectors, each of which are ...

ESOS is an energy assessment and energy saving scheme that is established by the Energy Savings Opportunity Scheme Regulations 2016, under the Environmental Protection (Energy End-Use Efficiency) Act 2009.

To reduce CO₂ emissions and exposure to local air pollution, we want to transition our energy systems away from fossil fuels towards low-carbon sources. Low-carbon energy sources include nuclear and renewable technologies.

The Save Energy Systems solution suite offers Asset Management to help maximize the efficiency and longevity of your Facility's assets. Digitally take care of optimizing and controlling energy distribution and automation systems across different voltage levels.

The aim of these Regulations is to cut carbon emissions and reduce energy consumption by requiring large businesses to fully quantify their energy use and identify energy reduction measures. ESOS is a mandatory energy assessment scheme for organisations that qualify as large undertakings.

Between 2016 and March 2022, Eco Wave Power operated a grid-connected proof-of-concept wave energy array in Gibraltar, as part of a 5 MW Power Purchase Agreement that EWP signed with the Government of Gibraltar and Gibraltar's National Electric Company, GibElectric.

The SES Solution Platform is a patented innovation at the forefront of energy management technology. Engineered to optimize building energy consumption, this advanced platform provides precise control over HVAC energy management systems, ...
