The cost of a solar water heater varies depending on the type of system, tank size, location, and other factors. According to our research, solar water heater installation costs between \$ 1, 8 00 and \$ 5, 8 00, * or \$3,700 on average. However, most solar water heaters qualify for a federal tax credit worth 30% of their cost.

Solar energy plays an important role in reducing fossil energy used to maintain the indoor climate and domestic hot water supply [1].Solar water heating system (SWHS) has been widely used all over the world [2].Thermal energy storage (TES) is considered the best way to solve the problem that the supply and demand of thermal energy do not coincide in time, ...

When a sensor detects that the solar collectors have reached a temperature above that of the storage tank, it activates a pump to circulate the water. Indirect circulation systems: These employ a heat-transfer fluid (usually a mixture of water and antifreeze) that circulates through the collectors and a heat exchanger.
