Most solar power plants, irrespective of their scale (i.e., from smaller [12] to larger [13], [14] plants), are coupled with thermal energy storage (TES) systems that store excess solar heat during daytime and discharge during night or during cloudy periods [15] DSG CSP plants, the typical TES options include: (i) direct steam accumulation; (ii) indirect sensible TES; ...

Seitz [18] carried out a cost sensitivity analysis for the four main factors (SOE unit cost, thermal energy storage system cost, solar field cost and electricity price from power grid), and pointed out that SOE unit cost and electricity price are main influences on hydrogen production cost. Comparing with the thermal and electrical approaches ...

Ma sees an opportunity for particle thermal energy storage to play a role in cost-effectively supplanting natural gas. By using a heat pump, one unit of electricity is transformed into two to three units of heat, which can be stored in the particle thermal energy storage system and then later delivered to the end user (depending on the ...
