

# Spain inter energy

Who is InterEnergy?

For more than thirty years, InterEnergy has powered people and cities across the Caribbean and Latin America, providing reliable, cost-effective and clean energy to the Dominican Republic, Panama, Jamaica, Chile, Uruguay and we have deployed the most sophisticated platform for electric vehicle charging stations in the Caribbean and Latin America.

Does Spain need wind power?

Spain has long been a leader in renewable energy, and has recently become the first country in the world to have relied on wind as its top energy source for an entire year. The country is attempting to use wind power to supply 40 percent of its electricity consumption by 2020.

What are the main sources of energy in Spain?

Andorra Thermal Power Station (Teruel). Primary energy consumption in Spain in 2020 was mainly composed of fossil sources. The largest sources are petroleum (42.3%), natural gas (19.8%) and coal (11.6%). The remaining 26.3% is accounted for by nuclear energy (12%) and different renewable energy sources (14.3%).

Why should Spain increase the interconnection level?

An increase of the interconnection level will be pivotal to improve the integration of Spain and the Iberian Peninsula into the Energy Union, as well as to accompany and steer the development of renewable energy sources in the region. Spain aims for an interconnection level of 15% in 2030.

How much solar power does Spain have?

In 2013, solar accounted for 3.1 percent of Spain's total electricity when capacity was 4,638 MW. By 2022 Spain had increased the solar capacity to 19,113 MW. In 2021, wind power provided 24% of Spain's total installed power generation capacity and 23% of total power generation. In 2023 it will reach 30 GW of capacity.

What will Spain's energy plan look like in 2030?

The final plan would benefit from more details on policies and measures. On energy security, the objective to reduce energy dependency to 59% by 2030 is very ambitious. Spain had an import dependency of 74% in 2017 and foresees phasing out of coal for energy and some of its nuclear energy capacity by 2030.
