

How should a waste transfer station be designed?

The transfer station is planned/designed to have adequate space for additional waste storage. Space should also be available for upgrading the transfer station with waste processing equipments. Adequate space should also be provided for waste unloading, vehicle and equipment maneuvering.

Why should you choose a custom-built energy transfer station?

Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with minimum hassle. Available both pre-assembled or split in easy to assemble modules if required due to space and height restrictions. Forget about waiting for on-site fabrication contractors.

What are transfer stations used for?

In areas with narrow and congested lanes where use of compacted trucks is limited, the transfer stations are used as a facility to transfer the waste from small vehicles and non-compacted trucks for segregation reloading into large vehicles. Likewise, when waste is not dense, they are brought to transfer station and compacted.

What is a large transfer station?

Mostly the large transfer stations are constructed outdoors. In addition to segregation, component separation size and volume reduction is carried out in the large transfer station. Few large transfer stations have inbuilt incinerators and composting facilities.

What is a medium transfer station?

Medium transfer station: It is similar to small transfer station except for the capacity of waste it can hold in a day. The capacity of medium transfer station is about 100 to 500 tonnes per day. They can also be constructed indoor or outdoor. In some cases few processing units are made available in medium transfer stations.

What is the capacity of medium transfer station?

The capacity of medium transfer station is about 100 to 500 tonnes per day. They can also be constructed indoor or outdoor. In some cases few processing units are made available in medium transfer stations. Large transfer station: Such station is designed especially for municipal collection vehicles.
