Nickel is used in geothermal technologies, BEVs, energy storage, carbon sequestration, and solar power concentration. It is also highly recyclable, helping meet consumer demand via the secondary market. ... WELLINGTON MANAGEMENT FUNDS ® is a registered service mark of Wellington Group Holdings LLP. Wellington Management Switzerland GmbH ...

By increasing the amount of energy produced from renewable sources, incentivizing demand-side efficiency,

and investing in climate mitigation and adaptation solutions, we believe society can reduce long-term costs, bolster energy independence and national security, and mitigate the worst effects of climate change.

In this two-part series, we examine the thematic investment opportunities arising from the world's energy transition. The physical and transition risks of climate change are expected to intensify over the next 10 to 30 years, and we believe that the energy transition is a major economic theme that will impact capital markets and the securities we invest in on behalf of clients.

While this paper explores the potential rising value of storage and flexibility to solve the intermittency of renewables, we remain positive on the future of renewable power development. Meeting the enormous challenge of the energy transition will require traditional fossil fuels, bridge fuels like natural gas, and renewables.
