

The expansion of renewable energy infrastructure in Morocco's southern provinces is part of a broader strategy to meet the increasing electricity demand across the country in preparation for the...

Through its roll-out of massive energy projects in occupied Western Sahara, Morocco becomes more economically connected to, and dependent on, the territory it holds under illegal, military occupation. It intends ...

Morocco is set to embark on its most ambitious renewable energy project to date, with plans to establish a massive solar and wind power installation in the Western Sahara Desert. The energy generated will supply Casablanca, Morocco's largest city, via an extensive 1,400-kilometer electricity transmission network .

The initial stages of another renewable energy project has been launched in the disputed Western Sahara region, which is under the control of Morocco. The Janassim project recently launched its measuring campaign ...

Through its roll-out of massive energy projects in occupied Western Sahara, Morocco becomes more economically connected to, and dependent on, the territory it holds under illegal, military occupation. It intends to export energy generated in the territory to Morocco proper, and to sell off any surplus to surrounding countries, including the EU.

The initial stages of another renewable energy project has been launched in the disputed Western Sahara region, which is under the control of Morocco. The Janassim project recently launched its measuring campaign of solar and wind energy potential.

EcoStruxure Energy Hub is a purpose-built building energy management system designed to simply and effectively raise energy awareness and drive energy performance in buildings. Simply connect your energy infrastructure and subscribe to the application to start your journey to achieve your energy and sustainability results, while maximizing the ...

Analyze energy usage and reduce waste: Gain energy awareness, baseline energy usage, identify areas to focus, set targets and take action. Track usage by load type (HVAC, lighting, and plug loads) and with that aggregate energy by site, building, floor, area, and zones which will result in energy usage reports by the format of monthly, daily ...

Achieve your business and sustainability goals with energy management software uniquely designed for buildings. Simply connect your energy systems and gain insights to conserve energy, reduce costs, and increase resilience.

EcoStruxure Energy Hub simplifies energy management for one or multiple buildings by offering a straightforward process: connect the smart energy infrastructure, and the platform takes it from there. It automatically collects, stores, visualizes, and generates reports on the energy data for these buildings.

Western Sahara's current green power capacity is about 1.3 gigawatts, or about a quarter of the nation's total renewables capacity. A project to develop a 3-gigawatt cable linking renewable plants in the territory to central Morocco has attracted interest from private investors, said the official.
